

Hoffman 3-D Brain Phantom™

Hoffman 3-D Brain Phantom™

Hoffman 3-D Brain Phantom™ Model BR/3D/P

Main Features:

- Anatomically accurate simulation of radioactivity distribution for brain SPECT and brain PET studies* and distribution of proton density and relaxation parameters for brain MRI studies
- Simulates 4:1 uptake ratio (by partial volume effect) seen for normal gray and white matter in flow and metabolic studies
- Single fillable chamber eliminates the necessity of preparing different concentrations of radioactivity
- Fillable and solid defects for basil ganglia region available

Main Applications:

- Evaluation of acquisition and reconstruction methods for brain ECT studies
- Evaluation of 3-D reconstruction methods
- Evaluation of 3-D attenuation and scatter compensation methods
- Evaluation of 3-D SPECT, PET and MRI registration techniques
- Research

Specifications:

Cylinder inside diameter: 20.8 cm

Cylinder inside height: 17.5 cm

Fillable volume: ~ 1.2 liter

Cylinder and 3-D Brain Insert™

SPECT Images

3D Brain Phantom Solid Defects Set (2)

Model BR/3D-SOL/SET2

- Hot and cold defects can be located in the basil ganglia region
- Allows user to determine image shape of the defect
